Section 2

1. It takes in a body parameter in the form of a text key/value pair.
2. An array of objects and their key/value pairs
3. <https://practiceapi.devmountain.com/api/posts/?id=555>
4. 200 or 409
5. <https://practiceapi.devmountain.com/api/posts/>
 - a. {
 - b. "text": "Marcus"
 - c. }
6. <https://practiceapi.devmountain.com/api/posts/?id=1325>
 - a. {
 - b. "text": "Red"
 - c. }
7. <https://practiceapi.devmountain.com/api/posts/filter/?text=blue>
8. application/json; charset=utf-8
9. Request missing: req.query.id or req.body.text will give a 409 error. Both are required!
10. It ignores the query and just sends all the posts. I think because its not specified in the back end to say what type of error it would give. It will always return an array of the posts

Section 3
